Let’s meet for a beer

Explore logistics solutions that go best with your brew
The art of craft logistics

Few experiences match the joy of sipping on a cold pint of fresh beer. As simple as this sounds, maintaining that freshness requires elaborate measures. These include all the steps from the moment the beer leaves the brewery, till the time it reaches the end-customer’s table.

Our specialised beer logistics help maintain those delicate flavours while also giving you complete visibility into the movement of your cargo.

Beer logistics that tick all the boxes

**Freshness**
How great a beer tastes depends on how well it is handled during transport and storage. Our cold chain solutions feature state-of-the-art containers that maintain the perfect temperature throughout your cargo’s journey – including its Warehousing & Distribution phase and the Intermodal movement.

**Visibility**
It’s no secret that poor visibility leads to miscalculations, whether you’re driving or managing a supply chain. That’s why our solution makes sure that you’re informed at every stage, through dynamic flow optimisation (4PL), and customisable dashboards and shipment-level updates. Not just that. You also get real-time track-and-trace capabilities through blockchain-enabled technology - TradeLens.

**Coverage**
Speed, sustainability and cost-efficiency are some of the prime drivers of our global transport network, which includes air freight, trucking, barge, and intercontinental rail services between Europe and South Korea. You can pick some or all of these options to ensure improvements in your logistics costs.
Our solutions for you

Fully equipped warehouses

- Strategically located in close proximity to all the major terminals and cities – Anseong, Busan, Osan and Incheon
- General, chilled and ambient storage (3-15°C)
- Bonded, storage, deconsolidation and cross dock warehouse
- Value-added services, food quarantine and sampling support available
