

# Ensure your sustainability efforts are verified and certified

How to get your Maersk ECO Delivery  
CO<sub>2</sub> saving certificate.

Reducing emissions is an ambition that is shared by more and more companies today. To help meet their sustainability goals companies are choosing to transport their goods with Maersk ECO Delivery. A climate friendly shipping option that replaces fossil fuels with green fuels, Maersk ECO Delivery is a simple solution to adopt. That seamlessly fits into your existing ocean transport supply chain and is backed by credibility in the form of a Maersk ECO Delivery CO<sub>2</sub> saving certificate.

## What do you get with a CO<sub>2</sub> Certificate?

Our certificate states how many tonnes of CO<sub>2</sub> emissions you have saved for a specified period. These savings are based on what would be the average emissions accrued during your goods' transport journey, if fossil fuel was used. The certificate also includes a break-up of the amount of green fuel used, FFEs shipped, CO<sub>2</sub> savings Well-to-Wheel and Tank-to-Wheel.

## Your journey to credible CO<sub>2</sub> reductions

Choosing to purchase Maersk ECO Delivery gets you one step closer to achieving your sustainability goals. To start, just have Maersk ECO Delivery added to your contract.

Next, based on your preferred trade lanes, calculations will be done on the fossil fuel emissions that will be incurred on your goods' journey. To reduce your emissions, a purchase of sufficient green fuel is made and then used in Maersk's ocean transport network. These green fuels are made from waste streams that are unfit to use for human or animal consumption. These are referred to as second-generation biofuels. Replacing fossil fuels with these instantly reduces your carbon emissions, as we reduce your emissions at source.

Maersk green fuels and its supply chain are verified by the International Sustainability and Carbon Certification (ISCC) through proof of sustainability documentation. The methodology for accounting emissions is based on Clean Cargo and GLEC (Global Logistics Emissions Council) emission factors and is certified by the Roundtable for Sustainable Biomaterials (RSB).

We ensure auto-generated performance tracking of Maersk ECO Delivery shipments. And a Maersk ECO Delivery CO<sub>2</sub> saving certificate will be issued. The process is audited by PwC in accordance with the International Standard of Assurance Engagements 3410 (ISAE 3410 – Assurance Engagements on Greenhouse Gas Statements), showing CO<sub>2</sub> savings for the scope of the Maersk ECO Delivery agreement.
